# OpenCart Application - Manual Testing

The objective of this e-commerce project is to develop a user-friendly and secure online shopping platform for customers to browse, purchase and track their orders.
The project will involve the development of a web-based application using OpenCart, an open-source e-commerce platform. **The application will include features such as user registration and login, product catalog, shopping cart, checkout, payments gateway integration, and order management.**
**Please note** - Requirement documentation contains details on user stories, test cases, and design mockups to each requirement to provide more clarity and context for the development team.
The project will aim to provide a seamless user experience and ensure the security of sensitive customer information. The target audience for this e-commerce platform will be customers looking to purchase a wide variety of products online.

| Requirement | Description | Priority | Acceptance Criteria |
|---|---|---|---|
| Login | Users should be able to create an account and log in to the system. | High | - User can access the login page from the homepage. User can enter their credentials and click the "login" button. User is redirected to their account dashboard upon successful login. |
